

DaemonCore Academy Assessment Standard

Evidence requirements for local training and practical assessment

DOCUMENT	RELEASE	STATUS	PUBLISHED
DC-DOC-900-A	9.0.0	Official	14 September 2026

Intended audience Learners, instructors, training administrators, and reviewers

This standard defines how DaemonCore Academy evaluates practical work. Completion depends on ordered evidence from a live or explicitly synthetic exercise, not attendance, copied commands, or a successful process exit alone.

Purpose and scope

The standard applies to Academy lessons, scored workbenches, Web Forge, Enterprise Forge, Living Range, drills, capstones, and local Testing Mode. It does not authorize activity against an external system. Any live external assessment requires separate written authorization, scope, rules of engagement, and organizational approval.

The central requirement is simple: an operator must demonstrate the expected outcome and preserve enough evidence for another reviewer to understand what was observed and why it supports the decision.

Assessment modes

Training Mode exposes suggested commands and guidance so the learner can understand the workflow. Testing Mode withholds suggested commands, disables guidance, and evaluates the next unresolved objective using backend-validated execution evidence. Local Testing Mode is practice for a future independently administered examination; it is not itself a certification exam.

Mode	Commands	Guidance	Intended use
Training	Visible	Available with score cost	Instruction and deliberate practice
Testing	Withheld	Disabled	Independent local assessment practice
Professional range	Operator selected	Unavailable	High-discipline evidence collection

Evidence acceptance

Objectives are resolved in sequence. The range records the execution, exit status, output digest, and acceptance time. A command may differ from the suggested workflow when its output independently proves the current objective. An exit code of zero never grants credit by itself.

Gate	Required determination	Minimum evidence
Boundary	The correct case and scope were identified	Case identity, authorized objects, and stop condition
Positive control	The expected path behaves as documented	Independent observable value from the baseline
Comparison	One controlled difference is established	A second distinct value tied to the affected condition
Closure	The bounded finding or recovery is supported	Accepted submission or recovery proof

Scoring and integrity

Scores may account for objective coverage, evidence independence, unnecessary actions, guidance use, and elapsed time. Records are local and device-bound unless exported. Tampered receipts, skipped gates, missing evidence, or unverifiable outputs invalidate the affected result.

A passing exercise records capability demonstrated in that shipped scenario. It does not guarantee performance on an unknown production system, confer legal authority, or create a professional license.

Reviewer checklist

Check	Pass condition
Correct environment	The required live or synthetic range was active and sealed
Ordered gates	Every objective was accepted in sequence
Independent values	Evidence contains the required distinct observations
Bounded conclusion	The conclusion does not exceed the observed evidence
Record integrity	Receipt and referenced execution digests verify

Document control

This document describes DaemonCore Academy 9.0.0. When application behavior and this guide differ, stop the affected workflow and consult the release notes or support channel before continuing. Product and framework names belonging to third parties are used descriptively and do not imply endorsement.

Field	Value
Owner	DaemonCore Apps
Release	9.0.0
Classification	Public product documentation
Review trigger	Material product, policy, or credential-status change
